
Planetary Science Group

Curtin University has the largest planetary science research program in Australia (inclusive of the Desert Fireball Network) with 50% representation of women, a rarity in the Science Technology Engineering Maths [STEM] community.

The research encompasses multiple STEM fields, pure and applied, with an award-winning outreach program to connect with the public.

Planetary research endeavours are fundamental to space exploration and are key drivers for the sector. The Group has a formal partnership with NASA, a contract with Lockheed Martin, and are currently involved in five international space missions.
